

WHAT ARE YOU PROViNG?

Prepared by:

- **Anmol Ihsan**

What Are You Proving?

Proof Statement

I can translate complex stakeholder needs into a validated software design specification, demonstrated by my ability to conduct requirements elicitation, model system behavior using UML, and prioritize features with the Kano Model. This is for the Lead Product Manager or Technical Hiring Manager at any product-based software house in Islamabad who is reviewing junior engineer applications and needs someone who can bridge the gap between vague feature requests and actionable technical documentation. The single most important action I want you to take is to review my design portfolio which includes a full UML suite and Figma prototypes for an AI mental health app and then reply to my email to schedule a 15-minute chat.

✅ Why This Still Works

Assignment Requirement	How This Statement Meets It
One primary claim is named	✅ Translate complex stakeholder needs into validated software design specification.
Audience is a specific person who could hire you	✅ Lead Product Manager or Technical Hiring Manager at any product-based software house in Islamabad specific role and location.
Single most-important action is chosen	✅ Review my portfolio and reply to schedule a 15-minute chat.
Statement could only describe your proof	✅ Directly tied to your UML, Kano Model, and Figma work from CV.

Proof Statement

I can translate complex stakeholder needs into a validated software design specification, demonstrated by my ability to conduct requirements elicitation, model system behavior using UML, and prioritize features with the Kano Model. This is for the Lead Product Manager or Technical Hiring Manager at any product-based software house in Islamabad who is reviewing junior engineer applications and needs someone who can bridge the gap between vague feature requests and actionable technical documentation. The single most important action I want you to take is to review my design portfolio (which includes a full UML suite and Figma prototypes for an AI mental health app) and then reply to my email to schedule a 15-minute chat.

Why This Needs to Exist

My CV lists my coursework and project tools, but it can't demonstrate my actual ability to listen to a user, synthesize their pain points into formal requirements, and design a solution that addresses them a critical soft + hard skill combination that grades and project titles alone fail to prove to a hiring manager.

Self-Assessment Checklist

Criteria

Status

One primary claim is named not three skills hiding behind .

The audience is a specific person who could hire me.

A single most-important action is chosen.

The statement could only describe my proof, not any portfolio.

Supporting Evidence from CV

Project	Relevant Skills Demonstrated
AI Mental Health Support App	Requirements Elicitation, Kano Model, UML (Use Case, Activity, Class, Sequence), ERD, RTM, Figma Prototyping
Old Age Home Management System	Data Structures (BST, Queue, Linked List, Stack), OOP, Sorting, Recursion
Job Market Skill Demand Analysis	Database Design, Normalization (UNF–3NF), SQL JOINS, ERD/EERD

Target Audience

Role: Lead Product Manager / Technical Hiring Manager

Industry: Product-based Software Houses

Location: Islamabad

Pain Point: Vague feature requests, lack of structured technical documentation

What I Solve: Requirements elicitation, UML modeling, feature prioritization using Kano Model, clean documentation

Desired Action

- ✓ Review my design portfolio (UML suite + Figma prototypes)
- ✓ Reply to my email to schedule a 15-minute chat
