

AI WORKFLOW AUDIT AND TOOL SETUP

Prepared by:

- **Anmol Ihsan**

Part 1: Workflow Audit 10–15 Recurring Tasks

#	Task	Classification	Rationale
1.	Reading and summarizing academic papers for research	Delegate to AI with review	AI can extract key arguments and methodology quickly; I review for accuracy and nuance
2.	Drafting emails to professors and collaborators	Collaborate with AI	AI provides structure and tone suggestions; I personalize and add context
3.	Writing Python scripts for data analysis	Just me	Requires deep understanding of my data and research questions; AI often produces code that needs too much debugging
4.	Creating presentation slides from research notes	Delegate to AI with review	AI can structure content and suggest layouts; I verify accuracy and add visuals
5.	Scheduling meetings and coordinating with team members	Fully automate	Calendar tools with AI scheduling handle this with minimal input
6.	Proofreading and editing my own writing	Collaborate with AI	AI catches grammar and flow issues; I make final judgment on style and meaning
7.	Brainstorming research question ideas	Collaborate with AI	AI generates novel connections; I evaluate feasibility and relevance
8.	Translating technical documents between languages	Delegate to AI with review	AI handles translation well; I check technical terminology accuracy
9.	Writing grant proposal narratives	Just me	Requires personal voice, passion, and precise alignment with my research vision
10.	Formatting citations and bibliographies	Fully automate	Reference managers with AI features handle this completely
11.	Reviewing literature for gaps	Collaborate with AI	AI scans vast literature; I synthesize and identify meaningful gaps
12.	Responding to routine student inquiries	Delegate to AI with review	AI drafts responses to FAQs; I review before sending

13.	Designing figures and charts for publications	Collaborate with AI	AI suggests visualization approaches; I refine for clarity and aesthetics
14.	Taking meeting notes and extracting action items	Delegate to AI with review	AI transcription and summarization; I verify key decisions
15.	Reflecting on weekly progress and planning next steps	Just me	Personal reflection requires my own judgment and priorities

Part 2: Tool Accounts Setup

Completed Tasks:

- Claude account created (claude.ai)
- ChatGPT account created (chat.openai.com)
- Anthropic Academy account created
- Enrolled in AI Fluency: Framework & Foundations
- Completed Module 1 (foundations of AI collaboration)

Part 3: Claude Project Configuration

Project Name: Research & Academic Workflow Assistant

Custom Instructions:

Who I am:

I am a graduate student in Software Engineering with a strong interest in software development, UI/UX design, web development, and academic research. I juggle multiple responsibilities: writing research papers, completing university assignments, preparing technical documentation, creating presentations and project reports, and structuring study notes and learning roadmaps. I aim to work smarter, not harder, while maintaining high academic and professional standards.

Tone Preferences:

- Professional yet approachable and conversational
- Clear, concise, and well-structured (bullet points over dense paragraphs)
- Evidence-based, with citations where appropriate
- Avoid overly technical jargon unless I explicitly request it
- British English spelling and phrasing throughout

Current Goals:

- Complete the **UI/UX prototype and final report** for my Software Engineering capstone project by **August 20, 2026**
- Submit a **research paper abstract** to a local/national conference by **September 10, 2026**
- Improve writing efficiency for academic papers and technical documentation
- Build a reusable template system for study notes and learning roadmaps
- Balance research, coursework assignments, web development projects, and professional development effectively

Part 4: Three Target Tasks for FL-02 through FL-04

#	Task	"Done Well" Definition
1.	Reading and summarizing academic papers	Summary captures: (a) research question, (b) methodology, (c) key findings, (d) limitations, (e) relevance to my work. Extracts 3–5 actionable insights per paper. Completed within 15 minutes per paper (vs. 45 minutes manually).
2.	Drafting emails to professors/collaborators	Draft is: (a) contextually appropriate tone, (b) includes all necessary background, (c) has clear call-to-action, (d) requires ≤ 2 minor edits from me. Completed within 3 minutes per draft.
3.	Creating presentation slides from research notes	Output includes: (a) logical slide flow, (b) key points per slide (≤ 5 bullet points), (c) suggested visuals/figures, (d) speaker notes. Requires ≤ 30 minutes of my editing time per 10-slide deck (vs. 2 hours manually).
